

What will be invested in?

The tariff update will enable us to continue improving Mijas's water and sewerage service through measures such as:

The gradual rollout of smart meters to measure consumption more accurately and detect faults sooner.

Scheduled cleaning of storm drains to reduce problems during rainfall.

Expansion and maintenance of the sewerage network in areas where it is still needed

Reinforcement of the civil works teams so they can respond more quickly to incidents and faults.

Renewal of vehicles and technical equipment to provide a more efficient service.

A more modern service for a municipality that continues to move forward

These improvements aim to provide a more efficient, more sustainable water service with greater responsiveness, keeping the well-being of all Mijas residents in mind.

MIJAS'S WATER SERVICE IMPROVES TO OFFER YOU MORE

New bimonthly billing

More information, greater control over consumption, updated tariffs, and new investments to improve the municipality's water supply and sewerage.

How do the new by-laws apply?

Following the approval of the new municipal bylaws on water supply to properties and sewerage, let us look at an example of how this bi-monthly billing is applied to the water-supply tariff for properties:

Fixed charge

This is the amount that guarantees service availability, network maintenance, and incident response.

Example for average consumption of 10 m³ per month:

The fixed quarterly charge was €10.26 and, following the update, would become €12.24 per quarter.

With the new bimonthly billing, it becomes €8.16.

Variable charge

It depends solely on the water you consume

With the new bimonthly billing, consumption blocks are adapted to the new meter-reading period so that the tariff remains proportional to the use made.

Example of the variable charge for consumption band 1: 0 to 15 m³:

With the new bimonthly billing, this becomes a 0 to 10 m³ band.

Previously, billed quarterly, it cost €16.20 and with the update would become

€19.35. Now, with the new bimonthly billing, it will be €12.90 every two months.

Important

The change **does not merely involve changing the frequency of the bill**. It also makes it possible to adapt the service to the municipality's current needs and ensure the investments needed to continue improving it.

What is changing?

From now on, the water bill will be issued every two months, instead of every three months

In addition, **the water supply and sewerage service tariffs are updated** in accordance with current regulations and to ensure a higher-quality service.

What are the advantages of receiving the bill every two months?

- You will be able to monitor your water consumption more closely.
- It will be easier to detect possible leaks or abnormal consumption.
- The amounts will be spread more evenly throughout the year.
- The billing system will be more agile and closer to actual consumption.
- It promotes more responsible and efficient water use.
